

A scatter plot showing the relationship between Height (x-axis) and an unlabeled variable (y-axis). The x-axis ranges from 5.0 to 6.0 with major ticks every 0.2 units. The y-axis is unlabeled. A vertical dotted line is drawn at Height = 5.5. The data points, represented by blue circles, are clustered at a low y-value across the entire height range, with a slight increase in density around Height = 5.5.
